

Tor Hill Woodland Management Plan Summary 2023-2033

National
Trust

Compartment T1

**5.93 hectares of native
woodland in Somerset**

Habitats and Species

Tor Hill is a mature woodland made up of broadleaved trees. Including native oak and ash, and non-native holm oak and sycamore. The ground flora is well developed and representative of ancient woodland flora typical of the region

Designations

The woodlands at Tor Hill are designated as Ancient Semi-Natural Woodland (ASNW).

Management Approaches

Our aim is to manage our woodlands to create a mosaic of woodland, scrub, and grassland habitats across the Mendip Hills and Mid Somerset. This will involve applying active and targeted woodland management over the area to join up vital corridors between the Mendip Woodland SACs, priority ancient woodland and improve existing woodland habitats.

General thinning of the woodlands at Tor Hill will open up the canopy, allowing more light to reach the forest floor promoting healthy growth of trees and ground flora, while releasing veteran trees from competition.

This abridged plan provides a summary of a detailed plan covering the National Trust owned woodlands across Mid-Somerset. This full plan can be seen by visiting <https://forestplans.co.uk/midsomerset/>.
